## PROFILE SUMMARY

Motivated and detail-oriented Python Backend Developer with hands-on experience in developing database-driven web applications, REST APIs, authentication systems, and backend modules using Python, Django, FastAPI, MySQL, and PostgreSQL. Strong understanding of backend architecture, API development, database design, role-based access control, debugging, and software development workflows. Quick learner with strong problem-solving skills, clean coding habits, and the ability to adapt to production-level development environments.

## SKILLS

| Type                 | Tool/Technology (Scale out of 10)                                                                                | Type                  | Tool/Technology (Scale out of 10)                                                         |

|---------------------|-------------------|---------------------------------|------------------------------------------------------------------------------------|
| Nov 2025 - Present  | SyntecX Solutions | Backend Developer               | Backend modules, APIs, database workflows, debugging and production-level systems. |
| Sep 2025 - Nov 2025 | IDIOSOL           | Python Backend Developer Intern | Backend features, database operations, modular code and API workflows.             |
| Jun 2025 - Aug 2025 | AJK IT Board      | Web Development Intern          | Web interfaces, API-based workflows and professional development practices.        |
| Jul 2024 - Oct 2024 | Hi-Tech Solution  | Full Stack Developer Intern     | CRUD operations, forms, validation, debugging and database connectivity.           |

## EDUCATION

| Duration    | Institute                          | Degree/Course                                |
|-------------|------------------------------------|----------------------------------------------|
| 2021 - 2025 | University of Azad Jammu & Kashmir | BS Software Engineering<br>CGPA: 3.78 / 4.00 |

## PROJECTS

### **Tourista - AI Powered Smart Tourism Platform**

**Tools:** Python, Django, PostgreSQL, REST APIs, Bootstrap, AI Integrations

**Contribution:** Worked as a backend developer and full-stack contributor.

**Preface:** Tourista is an AI-powered tourism platform developed as a Final Year Design Project. The system provides smart travel planning, user management, trip planning workflows, recommendation-based features, and AI-assisted travel support. The backend includes authentication, database-driven modules, structured APIs, and scalable application logic.

### **Multi-Vendor E-Commerce Backend System**

**Tools:** Python, Django, MySQL, REST APIs, Bootstrap

**Contribution:** Worked as backend developer.

**Preface:** Developed a role-based e-commerce system with Super Admin, Store Admin, and Customer modules. The system includes authentication, store management, product management, cart functionality, order workflow concepts, and relational database design.

### **AI Recommendation API**

**Tools:** Python, FastAPI, PostgreSQL, REST APIs

**Contribution:** Worked as backend API developer.

**Preface:** Developed REST API-based recommendation workflows using FastAPI. The system handles request validation, structured JSON responses, backend recommendation logic, and API documentation workflows.

### **WhereWorks / Workforce Management System**

**Tools:** Python Backend Concepts, Databases, REST APIs

**Contribution:** Backend development and system workflow support. Employer: SyntecX Solutions.

**Preface:** Worked on workforce management and enterprise workflow-related modules involving employee tracking, attendance workflows, reporting, and backend process handling. Contributed to backend features, debugging tasks, and database-driven system improvements.

### **PTCL / Enterprise Backend Workflow Modules**

**Tools:** Python Backend Concepts, Databases, APIs

**Contribution:** Backend module support and debugging. Employer: SyntecX Solutions.

**Preface:** Contributed to backend workflow modules related to enterprise operations and internal business processes. Worked on understanding existing systems, debugging issues, and supporting backend functionality.

### **Other Academic Projects**

**Tools:** Python, OpenCV, Scikit-learn, NLP, Cloud Computing Concepts

**Contribution:** Developed mini projects during university coursework.

**Preface:** Machine Learning mini project, Digital Image Processing project using OpenCV, NLP-based text processing project, cloud computing mini project, and portfolio website.
